

The Motion Language.

Motion is a first-class primitive of this system — level with type, spacing, color, and components. This is how every current and future Sarpras Operations product moves, and why.

Executive Command Center • Driver Operations • Engineering • Vehicle Management • Petty Cash • Request Center • Analytics • Future products

01	Philosophy	Five communications	02	Timing & easing	Six rhythms
03	First paint	Chronological	04	Component catalogue	Live
05	Emotional rhythm	Healthy vs Critical	06	Operational mood motion	State without color
07	Realtime behaviour	No reload	08	Reduced motion	Accessibility
09	Performance & implementation	60fps	10	Adoption	Five laws

01. PHILOSOPHY

Every motion answers a question.

Nothing here moves because movement is possible. Before any element is allowed to animate, it must answer one question: *what operational information is being communicated?* If the honest answer is “none,” the element stays still. Stillness is the default state of a healthy operation.

Every sanctioned movement resolves to one of five communications. This is the whole vocabulary — there are no others.

STATE CHANGED

6

+1 baru

Trip Aisdi

State changed

Something in operations is now different from a moment ago. Motion marks the transition so the change is witnessed, not silently discovered.

HIERARCHY

Hierarchy

Order of appearance teaches order of importance. The eye is led through the briefing once, in the sequence it should be read.

FOCUS

Buka Skenario

Focus

Where can I act, and where am I now. Focus and hover draw a quiet boundary around what is interactive — never suppressed.

CONTINUITY

Disetujui — naik ke atas

Permintaan berikutnya

Continuity

This is the same object, still here — it moved, it did not reload. The executive never loses their place on the page.

CONFIDENCE

91

Confidence

The system is sure of itself. A score settles smoothly to rest in one motion; nothing flickers, resets, or second-guesses.

02. TIMING & EASING

Six rhythms. One easing family.

We do not think in milliseconds; we think in rhythm. Every interaction is assigned one of six named tempos. Durations are the reference range for each — engineering tunes within them, never outside.

evolic best(1, 2, .7, -.2, .2)	The standard ease — a gentle out-curve that starts with intent and settles softly. One exception: Urgent uses a firmer decelerate curve. No springs, no bounce, ever.
-----------------------------------	--

Immediate
0-19ms

Taps, presses, toggles. Confirms the system already heard you — no perceptible delay.

Responsive
120-170ms

Hover lift, focus ring, small local state. Feels connected to the pointer.

Measured
240-360ms

Disclosure, section expansion, list reflow. Long enough to follow, short enough to trust.

Calm
480-680ms

Health-score reveal, hero settle. The signature entrance tempo of the platform.

Deliberate
700-1000ms

The full first-paint cascade and hero fills. A single unhurried assemblage of the page.

Urgent
200-320ms • Fire

Critical-state changes. Shorter and firmer — decisive, never frantic or flashing.

03. FIRST PAINT • CHRONOLOGICAL

The opening sequence, frame by frame.

The page assembles once, top to bottom, on first paint only — never again on scroll. It is a single choreographed **fadeUp** cascade whose only job is to lead the eye through the reading order the executive should follow. Watch it, then read what each beat communicates.

Sarpras Operations / Executive

KAB, 9 JUL 2026

Selamat Pagi, Evan.

91

Semua berjalan normal.

Satu driver memasuki zona kelelahan; armada 0 kas tetap aman.

Pusat Simulasi

UI skenario tanpa menyentuh data produksi.

THE BEATS & WHY

00s **Greeting**

00ms

Orientation first — who and when. A soft anchor before any data.

80ms **Headline**

80ms

The one-sentence verdict leads, because it is what the executive reads first.

180ms **Health ring**

180ms

The number the headline refers to sweeps up to meet it — confidence, settling.

240ms **Operational pulse**

240ms

Supporting metrics count in beneath the verdict — evidence for the claim.

340ms **Attention**

340ms

The single thing that needs a person appears next, before the routine.

420ms **Recommendation & simulation**

420ms

What you could do — offered after what you must know.

680ms **Launcher**

680ms

The way out to the rest of the platform arrives last, quietly.

04. COMPONENT CATALOGUE

One language, every component.

Each component inherits the same vocabulary and easing. Below, every motion in the system, live and replayable. Every one names its trigger, its rhythm, and the question it answers.

Health ring reveal

Calm • first paint, once per session

91

Arc and numeral tween together from empty to rest. Never appears instantly, never blinks in.

Score correction

Calm • new data arrives

87 → 91

The arc assesses directly to the new sweep and counts through — it never resets to zero first.

Card hover

Responsive • pointer (desktop / tablet)

default hover

Border strengthens, shadow lifts to shadow-md, translate(-2px). Transform = shadow only.

Button press

Immediate • pointer down

Buka Skenario

Settles down 1px and brightens on contact, springs back on release. The touch is felt instantly.

Today's Story — disclosure

Measured • tap "Lihat lebih"

Utilisasi driver stabil 82%

Approval WO 3.2 jam

Permintaan I & A hari — baru

Petty cash bersih — baru

Height and opacity morph together; new row fades up on a 40ms stagger. Reveals more — never removes what was visible.

Focus ring

Immediate • keyboard focus

Tinjau Wellness

2px accent-thin ring at 2px offset, instant. Accessibility is not optional and is never animated away.

Attention pulse

Calm • mood = warning / critical

1 driver berisiko kelelahan

The platform's sanctioned persistent motion. 2.4s low-amplitude fade — a heartbeat, never a hard blink.

KPI bar fill

Calm • section entry

82% 64% 93%

Bars grow from the left with scale — a compositor transform, not an animated width. Cheap at any length.

Toast

Measured • background action confined

Skenario disimpan

Rises 12px and fades in, holds, then reverses. Enters from the edge it belongs to — bottom-up.

Dialog

Measured • destructive / confirm

Konfirmasi tindakan

Scrim fades; dialog lifts 8px + scales from 0.985.

Scrim fades the page back; the dialog lifts a hair and scales up subtly. No bounce on arrival.

Theme switch

Measured • light → dark

Semua berjalan normal.

Colors crossfade over ~300ms; nothing moves or reflows. The page you were reading stays exactly in place.

Empty state

Calm • no data yet

Perugasan hari ini akan muncul di sini.

Fades in calmly with no skeleton shimmer and no spinner. Absence is presented as calm, not as loading.

05. EMOTIONAL RHYTHM

The interface has a heartbeat.

Tempo is emotional information. When operations are healthy, motion becomes invisible — the page settles and holds perfectly still, because there is nothing to say. When operations are critical, one restrained pulse keeps a single point alive, and transitions turn crisp and decisive. Same components, different pulse. No flashing, ever.

HEALTHY

Calm, settling, then still

91

Sangat Baik

Semua berjalan normal.

A single slow entrance, then complete rest. There is no persistent motion — **stillness is the reward of a healthy operation.**

CRITICAL

Decisive, one quiet pulse

42

Kritis

Tindakan diperlukan hari ini.

Entrances shorten and firm up; the ring arrives quickly and decisively. One low-amplitude pulse marks the live risk — **urgent, never frantic.**

06. OPERATIONAL MOOD MOTION

Motion states the condition — not just color.

A colorblind executive, or one glancing from across the room, must still feel the operational state from movement alone. The same layout carries five moods; each has its own tempo, entrance, and settle. Select a state and replay.

HEALTHY

Sangat Baik

Semua berjalan normal.

Satu driver memasuki zona kelelahan; armada 0 kas aman.

HOW MOTION CARRIES THIS STATE

A single unhurried entrance, then perfect stillness. Nothing pulses, nothing repeats. The absence of motion is itself the message: there is nothing that needs you.

TEMPO

Slow

ENTRANCE

Calm

PERSISTENT

None

07. REALTIME BEHAVIOUR

Operations change while you read.

Live data arrives without warning. The interface never reloads and never flashes. Every update is a **continuity transition** — the changing value moves from its old state to its new one in place, so the executive keeps their orientation and simply witnesses the change. Step through a live shift below.

Skor Kesehatan Operasional

1

Menunggu Persewaan

1

Area Perlu Perhatian

1 driver berisiko kelelahan

Never reload

Live data mutates the values already on screen. The page is never rebuilt and the scroll position never moves.

Never flash

No color strobe, no full-card blink. Emphasis is a single brief settle; then quiet — the eye is drawn, not started.

Preserve orientation

New content expands into place from where it belongs. What the executive was already reading holds perfectly still.

08. REDUCED MOTION

Reduced, not removed.

When prefers-reduced-motion is set, the experience stays premium. We do not strip the interface bare — we swap the vocabulary. Positional travel and continuous pulses are removed; a brief, calm opacity settle remains so state changes are still witnessed. The reading order still teaches itself; it simply arrives without movement.

Standard

Skor kesehatan: 91

Denyut operasional

Perlu perhatian: 1

fadeUp 3px translate: staggered

Travel → fade

The spotlight is dropped. Elements arrive with a short opacity settle so state change is still witnessed.

Pulses stop

The first paint cascade runs on mount, not on scroll. No intersectionObserver re-triggering as the executive scrolls back up.

Tweens → snap

Ring sweeps and count-up resolve to their final value immediately, with a brief crossfade — never a hard cut mid-read.

Reduced

Skor kesehatan: 91

Denyut operasional

Perlu perhatian: 1

opacity only: no travel, near-instant

09. PERFORMANCE & IMPLEMENTATION

Cheap by construction. 60fps everywhere.

This runs inside Sarpras Operations on mid-range Android, older iPhones, and low-power laptops. The language is built so that being on-budget is the default, not a last-minute optimisation. Animate only **transform** and **opacity** — the two properties the compositor moves without re-painting or re-laying-out the page.

MOTION	PROPERTY	COST	NOTES
fadeUp entrance	transform + opacity	GPU	Composited. The workhorse of the whole language — free at any count.
Hover / press lift	transform + box-shadow	Low	Transform is free; shadow repaints a small area only. Fine on one element at a time.
Bar & progress fill	transform: scaleX	GPU	Scale from the left instead of animating width — no layout, no reflow.
Ring sweep	stroke-dashoffset	Low	Paints the stroke each frame, but on one small SVG. The one sanctioned non-transform tween.
Attention pulse	opacity	GPU	Composited. A single 8px dot; the only persistent animation on the page.
Theme crossfade	color / background	Red	Repaints surfaces once over 300ms. Acceptable because it fires rarely and nothing moves.
Skeleton shimmer	background-position	Red	Used sparingly and only during first fetch — retired the moment content mounts.

Transform & opacity first

Reach for width, height, top, left, or margin animation only when there is genuinely no transform equivalent — which is almost never.

Entrances fire once

The first paint cascade runs on mount, not on scroll. No intersectionObserver re-triggering as the executive scrolls back up.

Interruptible, not queued

A new real-time value overrides an in-flight tween to the newest state. Updates never stack into a backlog of animations.

Budget: one persistent motion

At most one looping animation on screen at a time — the attention pulse. Everything else has a definite end.

10. ADOPTION

One language, every module.

Executive Command Center is where this language was written, but it does not own it. Every module inherits the same five communications, six rhythms, and one easing family. Motion is now a shared primitive — a new product is “on-brand” in motion the moment it uses these tokens.

THE FIVE LAWS

1 Every motion answers a question

If it does not communicate state, hierarchy, focus, continuity, or confidence, it does not ship.

2 Continuity over surprise

Objects move and update in place. The interface never reloads out from under the person reading it.

3 Confidence over excitement

One easing family; no springs, no bounce. Calm when healthy, measured when warned, decisive when critical.

4 Readability over spectacle

Motion serves the fastest possible read of operational truth. It is never the thing being admired.

5 Reducible, always

The whole language degrades to opacity and instant state under reduced motion — and still feels premium.
